

Constrained alone vs interlocked - linear_test

left: hm.p_emu under this pair's own diagnostics | right: the same survivors under the parameter sets the sampler drew 346 drawn samples against 100,000 emulated ones; axes are 0-1 normalized parameters, x = first, y = second

● ruled out by this pair's own diagnostics ● right: those same survivors, as the backdrop
● left: survivors of those diagnostics | right: the parameter sets drawn --- alpha-shape hull

constrained by its own diagnostics alone

what the joint constraint actually leaves
